

Overview

Safety air guns

These products are divided into five different series and a category for special guns. Each series is based on grip type, with special functions and different

materials. There is a large selection of nozzles with different blowing forces and blowing patterns for each grip. All our guns can also be fitted with extension pipes of various lengths to further enhance user-friendliness.

You will find everything you need to know to choose the right safety gun on pages 88-89.

The 007 series

Safety air guns with unique advantages

Silvent **007-L**
See page 90

Silvent **007-P**
See page 92

Silvent **007-MJ4**
See page 93

Silvent **008-L**
See page 94

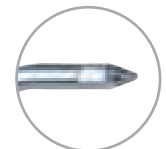

Silvent **0971**
See page 95

The 500 series

Safety air guns with short triggers that are easy on the hand

Silvent **500-S**
See page 96

Silvent **500-Z**
See page 98

Silvent **501 L-H**
See page 99

Silvent **520**
See page 100

Silvent **5920**
See page 101

The 2000 series

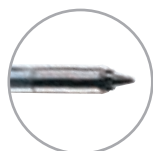

High force safety air guns entirely of aluminum

Silvent **2055-A**
See page 102

Silvent **2973**
See page 104

Silvent **2050-S**
See page 105

The 4000 series

Extremely powerful blowing tools for long distances

Silvent **4015-LF**
See page 110

Silvent **4020-LF**
See page 112

Silvent **4010-S**
See page 113

The 750 series

Robust safety air guns for aggressive environments

Silvent **755-L**
See page 106

Silvent **757-L**
See page 108

Silvent **753-S**
See page 109

Special

Safety air guns for more unusual applications

Silvent **BG-007**
See page 114

Silvent **100**
See page 115

Applications

SILVENT 007-MJ4

In certain applications too much blowing force can damage the object you are trying to clean. In such cases SILVENT 007-MJ4 is the right choice. Here one is used to blow clean a camera housing prior to final assembly.

SILVENT 007-L

All machines need to be blown clean of dust etc. A SILVENT 007-L is used here for general purpose cleaning and it is fitted with a safety shield to protect the operator.

SILVENT 530

Some applications require blowing deep inside a machine. A SILVENT 530 fitted with a bendable FlexBlow hose improves the working environment for the operator.

www.silvent.com

In the application database on our website you will find more examples and further information on how Silvent's products are used.

SILVENT 2973

SILVENT 2973 is often used in applications where a large surface must be covered with high blowing force. Here a machine is rapidly blown clean of dirt and debris.

SILVENT 2055-A-500

Here a chewing gum machine is being cleaned with a SILVENT 2055-A-500. This safety air gun is fitted with an extension pipe and has five times the blowing force of a conventional air gun.

SILVENT 4015-LF-1000

Paper mills need lots of blowing force to quickly clear machines in the event of production stoppage. The bazooka is often used in paper mills and other types of heavy industry.
